Step 3: You will now need to download the Intel HD Graphics driver and the Intel Switch Controller driver from Intel's website. Download the driver for your device as given below. Step 4: Now, install the Intel HD Graphics Driver and Intel Switch Controller driver using Device Manager. Step 5: You can install your device driver using Device Manager. In case you face any trouble, you can contact us through the below mentioned contact details. We will be happy to assist you. Hi i just played around on this game a bit and i noticed i can get it up to about 40fps when playing i then go on to some area with lazer deathrays and speed up to about 60 or so on my i7 920 after that everything goes to hell and i get horribly low fps with lazer deathrays and a very low speed i cant even jump i really want to play this game but i cant because of this. does anyone else have this problem or know how to fix it? also when u leave a place it dissapears from the screen. if it crashes to you cant respawn and another

question if u look at the games page, The one with all the games that say Windows 7 Only..When u click it says Windows 7 only but when i do a system32 search it says: "Windows 7 only: When the Steam client is installed, the icon appears only on Windows 7, 8 and 8.1. On other platforms, the game appears in your Library. Windows 8, 8.1 and 10: When the game is installed, the icon appears in your Library. You can switch the icon between "Windows 7 Only" and "Windows 8" or "Windows 8.1" and "Windows 10" using the icon in the bottom right corner of the Library. You cannot install the game through the Windows Store, and it will not appear in the Steam folder, except for the Windows 7 only version." would this mean u cant download it? cause its all full of game that only run on Windows 7? sorry for asking like this but im really stuck here and dont know what to do. well i have the real time thing turned on cause i want a higher framerate and everything seems to work fine on Windows 7 (Real Time) but on Windows 8/10 the framerate goes like 3-6 fps and it takes about 30-60 secs to load on 82157476af
